

## ASSEMBLY INSTRUCTIONS

# CLASSIC TABLE EXTENSION

- ❶ Scope of delivery: 1 x table extension, 2 x rectangular tube, 4 x knurled screw  
4 x wood screw
- ❷ Place the table face down. Put the table extension in position as shown, making sure that the edges of the tabletop are flush with the edges of the table extension.
- ❸ Now mark the position of the two metal tubes on the tabletop. Please mark the position on both sides of the metal tubes. Now lay the table extension to one side.
- ❹ Center the rectangular tube over the markings (the tube is a little wider and will therefore protrude beyond the marking on the left and right) and position it in front of the curved edge of the tabletop.
- ❺ **Important:** pre-drill the front hole with a 3 mm drill, as otherwise, cracks may form.
- ❻ Screw the rectangular tube tight at the front using the wood screw provided.
- ❼ Measure the distance between the edge of the tabletop and the front of the rectangular tube.
- ❽ Position the back of the rectangular tube at the same distance from the tabletop edge. Pre-drill the hole as described above and fix the tube in position with a wood screw.
- ❾ Proceed in the same way with the second rectangular tube.
- ❿ Insert the table extension into the rectangular tube, centering it if necessary so that the edge is flush with the edge of the tabletop.
- ⓫ Now insert and tighten the four knurled screws to fix the tabletop extension in position.
