

PROTECTIVE COVERS FOR FURNITURE

Product information / care instructions

Our protective covers are custom-made to fit each specific item of furniture with a certain size allowance added. They are intended to fit loosely and should never sit 'too tight.' This prevents damage during assembly/disassembly and ensures adequate ventilation.

The cover is attached with the cord with stopper provided.

Our cover is made from elastic, breathable fabric with a water-repellent PU coating. The material allows any moisture (water vapor) to escape through the fabric. Occasional 'airing', especially after extended periods of damp weather, helps to prevent the formation of mold/mildew.

Soiled covers can be cleaned in a washing machine (at 40°C or gentle wash cycle). Use only mild detergent/soap. A short spin cycle or cycle in a spin dryer is not a problem, but please **DO NOT IRON** the covers!
